

REVERSE AUCTIONS FOR ELECTRICITY & NATURAL GAS

Reverse auctions are the most effective method for procuring electricity and natural gas in the energy industry. By pitting highly competitive suppliers in the market against each other in a real-time bidding platform, our groundbreaking technology generates the lowest possible energy rates.

KEY FEATURES

Overtime Mode

Any low bid submitted with two minutes or less during the auction will reset the clock, ensuring bidding and counter-bidding continues until the lowest possible rates are uncovered.

No Blackouts

You and all the competing suppliers always see submitted bids from start to finish, meaning everyone always knows how low they need to be in order to win your business.

Real Time Savings Analysis

While energy suppliers bid and counter-bid to win your business, you watch as the rates fall and your savings grows.

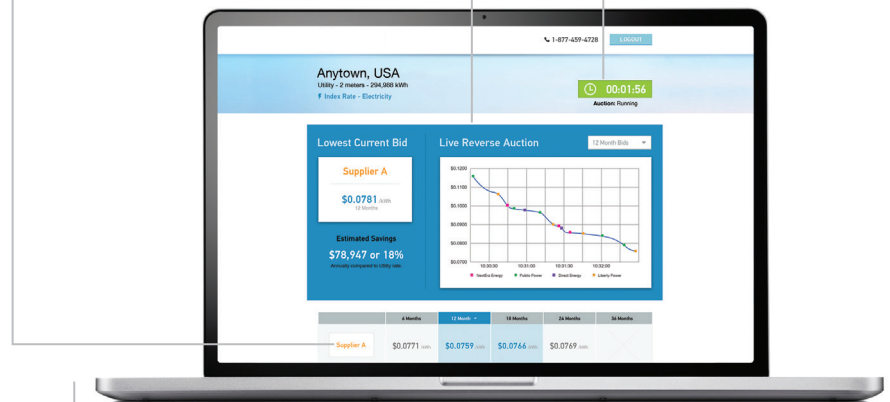

No Cost or Obligation

There's no cost to run a reverse auction, and no obligation to sign up with a supplier afterwards. You may lock in a rate right away, or wait for another time: the choice is yours.
